ACKNOWLEDGMENT OF ASSISTANCE

All manuscripts utilizing data made available through the Consortium should acknowledge that fact, as well as identify the original collector of the data (if applicable). The ICPSR Council urges all users of ICPSR data facilities to follow some adaptation of this statement with the parentheses indicating items to be filled in appropriately or deleted by the individual user.

The data (and tabulations) utilized in this (publication) were made available (in part) by the Inter-University Consortium for Political and Social Research. The data were originally collected by the (ICPSR, United States Census Bureau, other agencies or individuals). Neither the original collectors of the data nor the Consortium bear any responsibility for the analyses or interpretations presented here.

In order to provide funding agencies with essential information about the use of archival resources, and to facilitate the exchange of information about ICPSR participants' research activities, each user of the ICPSR data facilities is expected to send two copies of each completed manuscript to the Consortium. Please indicate in the cover letter which data were used.

INTRODUCTION

The ICPSR collection of demographic, economic and social data includes information recorded at the state and county levels for the United States from 1790 to the present. Collection and processing of the data for the years 1790-1960 were supported by National Science Foundation grants GS-1435, GS-1435A1, GS-1231 and GS-2473. The selection of variables to be included in this portion of the collection was carried out following general guidelines developed in a conference held at the Fels Institute, University of Pennsylvania, on October 16, 1964. The conference was sponsored by the American Historical Association's Ad Hoc Committee on the Collection of the Basic Quantitative Data of American Political History, a group which included historians, political scientists and demographers. A report of the Committee's recommendations is included in the ICPR Annual Report for 1964-65. Additional data for more recent years were incorporated into the collection partly through the financial support of National Science Foundation RANN Division grant APR75-01320.

The data are presently organized in the form of fifty-one data sets; the collection contains information on over 3400 counties and states and comprises over ten million card-image equivalents. The majority of datasets record information at the county level although a number of the datasets present data for states, cities, SMSA's and other geographical areas. All county-level data can be aggregated to the state level, and all data can be aggregated to regional and national levels. In addition, when the demographic and social data are merged with the ICPSR county-level election materials, aggregation to the Congressional District level is also possible.

The data for 1790 to 1960 were keypunched and verified by the ICPSR staff and a comprehensive series of manual and machine-aided error checks were carried out; errors located by these error-checking routines were corrected.

No further systematic error checks are planned, although errors discovered through use of the data will be corrected as they are reported to the ICPSR. The data selected from the 1970 Census and the 1962 and 1967 Censuses of Governments were also keypunched from printed reports by the ICPSR staff. The County and City Data Books and the 1972 Census of Governments data were acquired on magnetic tape from the United States Census Bureau. Only limited validity checks were performed on the data obtained in machine-readable form.

Sources used in the collection of these materials include the published federal decennial census reports as well as published and unpublished reports and computer-readable data collections prepared by the U.S. Census Bureau, other agencies and private individuals. Among the various bodies of data obtained from sources other than U. S. Census Bureau publications are two data sets dealing with economic conditions and a set of variables dealing with religion. The Farm Land Value data set contains, for years since 1850, figures on the average value per acre of farm land and buildings for each of the counties in the country. These data were tabulated from Census Bureau figures by Thomas J. Pressly and William H. Scofield, and published under the title Farm Real Estate Values in the United States, 1850-1959 (Seattle, Washington, 1965). A second body of economic data records bank deposits (by type of deposit as well as type of bank) annually for all counties except those in Wyoming for the years 1920-1936. These data were originally collected under WPA auspices and were obtained in manuscript form from the University of Wisconsin's Department of Economic History. Data on churches and church membership, by denominations, were obtained from the National

Council of Churches of Christ of the United States, as a result of their Survey of Churches and Church membership conducted in 1952. These data are also recorded for counties and supplement the U.S. Census Bureau's statistics on church bodies collected decennially from 1850 to 1936. Since 1936 no censuses dealing with religion have been conducted, making the National Council of Churches' data the most recent systematic county-level church membership data readily available.

Complete variable descriptions, as well as the detailed source citations for each variable, are presented in machine-readable codebooks supplied with each data request. The codebooks can also be furnished in advance, either in the form of computer printout or as xerox copies. The user is advised, however, to consult whenever possible the published sources of the data for discussions of the peculiarities of enumeration and tabulation categories. Brief descriptions of the variables included in the collection are included in the accompanying variable lists.

The standardization of identifying variables (such as state code, county name and identification number) across the ICPSR historical data collection permits the demographic, economic and social data to be routinely merged with the ICPSR collections of election returns.

The demographic, economic and social data can be supplied either as OSIRIS data sets or in the form of match-merged card-images on magnetic tape. Individuals requesting data may obtain specific variables or entire data sets, although costs of supplying data vary with the type of request. Detailed estimates of the cost of supplying particular bodies of data will be provided

prior to the actual filling of a data request. General cost considerations and servicing policies are discussed on pages 271 through 275 of the Guide to Resources and Services of the Inter-university Consortium for Political Research, 1974-75.

Form of the Data Variables

Most data variables are stored in nine-digit fields, although some variables have been stored in fields of fewer than nine digits. In all cases leading zeroes have been inserted to fill the data field; the data field for each variable is described in the codebook or data map which accompanies each body of data supplied by the ICPSR. There should be no blanks in the data variables: "0" values represent "none of the quantity enumerated." Decimal points (in percentages and dollars-and-cents variables) are not stored in the data but are implied, and their locations noted in the descriptive information included with each data request.

Missing Data Codes

When the actual values of data variables could not be represented, missing data codes were inserted. The following table describes these codes which the user may encounter in any data set.

<u>CODE</u>	<u>INTERPRETATION</u>
-00000009	Data not available (not reported, schedules destroyed, information lost, etc.)

-00000008	Data illegible in published volume
-00000007	Data category not appropriate for a particular unit of analysis
-00000006	Data recorded under another political unit
-00000005	Data not reported to avoid violation of confidentiality rules of data collector (eg., the Census Bureau)
-00000004	Data included under another entry (combination of two or more data variables, etc.)
-00000001	No data available (same as code -00000009)

Data variables stores in fewer than nine digits will either have missing data codes imilar to those listed above but with fewer zeroes (eg., -000009 for a seven-digit variable), or will have a missing data code of 999's: the latter is to be interpreted in the same way as the -00000009 code mentioned above. The type of missing data code used for each variable is noted in the codebook supplied with each data request.

Identification Variables

The variable lists describe the data variables included in each data set, beginning with Variable 8. The first seven variables and the last variable in the data set contain information identifying the unit of analysis and the data set in general. It should be noted that although an identification field has been set aside for the Congressional District number, that variable is blank at the present time.

Variable 1: Data Type Code.

C for County-level record
S for State-level record

Variable 2: Year of the census from which data were obtained.

The last three digits of the year are
used (840 for 1840, 960 for 1960, etc.)

Variable 3: ICPSR State Code.

01 Connecticut	41 Alabama
02 Maine	42 Arkansas
03 Massachusetts	43 Florida
04 New Hampshire	44 Georgia
05 Rhode Island	45 Louisiana
06 Vermont	46 Mississippi
11 Delaware	47 North Carolina
12 New Jersey	48 South Carolina
13 New York	49 Texas
14 Pennsylvania	40 Virginia
	51 Kentucky
21 Illinois	52 Maryland
22 Indiana	53 Oklahoma
23 Michigan	54 Tennessee
24 Ohio	56 West Virginia
25 Wisconsin	
	61 Arizona
31 Iowa	62 Colorado
32 Kansas	63 Idaho
33 Minnesota	64 Montana
34 Missouri	65 Nevada
35 Nebraska	66 New Mexico
36 North Dakota	67 Utah
37 South Dakota	68 Wyoming
71 California	
72 Oregon	
73 Washington	
81 Alaska	
82 Hawaii	

Variable 4: Congressional District Number.

At the present time this variable is blank
in all ecological data sets.

Variable 5: County or State Name.

Seventeen characters are used to store the alphabetic name of the unit of analysis.

Variable 6: Catalog Entry Number.

Where applicable, the code assigned to each U. S. Census volume by Henry J. Dubester, in Catalog of U. S. Census Publications, 1790-1945 (Washington, D. C., 1950), has been used. This code was used to identify the original census data sets, and may not be applicable to the data in their present combined form.

Variable 7: Table Number.

The number of the table within the Census volume further identifies the original census data set; it may not be applicable to the data in their present combined form.

Variable n: County Identification Number.

Usually the last variable in each data set, this four-digit code number uniquely identifies each county within a state. The first three digits of this code correspond to the Federal Information Processing Standards (FIPS) code number assigned to counties in the contemporary period; a fourth digit was added to allow for the insertion of counties which existed in the past but which have disappeared.

Source Identification

Data maps and codebooks are furnished with each body of data that the user obtains from the ICPSR Archive. Contained in each codebook is information identifying the location, size and characteristics of each data variable, and a textual description of every variable. The last line of this description includes a source citation consisting of a volume identification number and a table number. The volume numbers prefaced by "Dub" refer to the code number assigned to each volume published by the

U. S. Census Bureau from 1790 to 1945; this number was assigned by Henry J. Dubester in Catalog of U. S. Census Publication, 1790-1945 (Washington, D. C. 1950). For volumes published after 1945, this volume identification number was assigned by the ICPSR. All census volumes from which data were taken are listed at the front of the codebook, along with their identifying volume numbers. Data users can thus obtain the source citation for each variable in the collection. The user of the machine-readable data is also advised to consult the original census publications for information as to enumeration, tabulation, and classification procedures, and for precise definitions of the items of information presented.

A Note on the Variables Presented

The variables described in the accompanying lists were selected from the information published in the census reports and other sources consulted. Therefore, the detail in which some categories of information are presented (most notably, age by race and sex in the pre-1870 data sets) reflects that presented in the original tabulations of the data. For example, county-level data by race and sex for ten-year intervals of age were published for the censuses of 1830-1860, and the information has been preserved in this form in the ICPSR files. When tabulation categories were collapsed for presentation in the published volumes (as in 1870), the variables stored in the ICPSR files would again be those which appeared in published form. Users of the data may thus discern a lack of continuity in the tabulation categories or detail presented from one ICPSR dataset to the next; this is merely a reflection of the discontinuities in the original sources themselves. In

some instances, variables representing category totals (such as total population, total number of farms, etc.) are not presented in the data sets, although they can readily be computed by summing their constituent parts.

Availability of Additional Data and Documentation

An extensive array of data from the 1970 Census of Population and Housing is also available from ICPSR. These data, also purchased from the U.S. Census Bureau and currently stored on approximately 100 magnetic tapes, record population, economic and housing information for individuals (the Public Use Samples) as well as many geographical areas (enumeration districts, census tracts, counties, SMSA's, etc.). Descriptions of the data items contained in the 1970 Census is too voluminous for inclusion in this document; these descriptive materials have been deposited by the Census Bureau at many libraries, or can be supplied by ICPSR at cost. Persons interested in obtaining portions of the 1970 Census should contact the Director of Archives, ICPSR, for further information on their availability.

Additional documentation for the files of data acquired from the 1972 Census of Governments has also been prepared. The governments data for 1972 contain information recorded for over 78,000 states, counties, minor civil divisions, school and special districts. Questions concerning this massive set of data files should also be sent to the Director of Archives, ICPSR.
